Continuation of Disposition of Claims: Claims subject to restriction and/or election requirement are 1,4-7,15-18,21,23,24,29,30,36,37,40,41,46 and 49-59.

DETAILED ACTION

1. This is a Restriction/Election in response to Applicant's reply of 10/02/2008. Claims 1-4, 12-16, and 34-45 are pending; claims 5-11, 17-33, and 35 are cancelled, leaving claims 1-4, 12-16, 34, 38, and 40-45 restricted herein.

Election/Restrictions

2. Newly submitted claims 36, 37, and 39 are directed to an invention that is independent or distinct from the invention originally claimed for the following reasons:
 - I. Claims 1-4, 12-16, 34, 38, and 40-45, drawn to a business and data model and computer readable medium storing a business and data model, classified in class 707, subclass 104.1.
 - II. Claims 36, 37 and 39, drawn to a method of analyzing the business market needs of an organization for decomposing the business needs into areas of analysis for configuring a business and data model, classified in class 705, subclass 7.
3. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination (II) as claimed does not require the particulars of the subcombination as claimed because a process of analyzing the business needs of an organization for decomposing business needs into areas of

analysis does not require the particulars of the business and data model. The subcombination (I) has separate utility such as a database for modeling a business useful to representing a business without requiring the particulars of the steps of analyzing the particular needs of the organization.

The examiner has required restriction between combination and subcombination inventions. Where applicant elects a subcombination, and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

4. Restriction for examination purposes as indicated is proper because all these inventions listed in this action are independent or distinct for the reasons given above and there would be a serious search and examination burden if restriction were not required because one or more of the following reasons apply:

- (a) the inventions have acquired a separate status in the art in view of their different classification;
- (b) the inventions have acquired a separate status in the art due to their recognized divergent subject matter;

- (c) the inventions require a different field of search (for example, searching different classes/subclasses or electronic resources, or employing different search queries);
- (d) the prior art applicable to one invention would not likely be applicable to another invention;
- (e) the inventions are likely to raise different non-prior art issues under 35 U.S.C. 101 and/or 35 U.S.C. 112, first paragraph.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a invention to be examined even though the requirement may be traversed (37 CFR 1.143) **and (ii) identification of the claims encompassing the elected invention.**

The election of an invention may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse. Traversal must be presented at the time of election in order to be considered timely. Failure to timely traverse the requirement will result in the loss of right to petition under 37 CFR 1.144. If claims are added after the election, applicant must indicate which of these claims are readable on the elected invention.

If claims are added after the election, applicant must indicate which of these claims are readable upon the elected invention.

Should applicant traverse on the ground that the inventions are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
